Orbi RBR750 to RBS750 (Satellite) Sync

Plug the Orbi Router into the Modem. Use Ethernet cable to connect: plug it from your modem to the yellow port on the Orbi RBR750 router. Now plug in the Orbi router's power and turn it on. Give it like 2–3 minutes. Lights will go solid white, maybe blink a bit, means the router is ready for the setup.

➤ Orbi RBR750 Router Setup

- Download the official Netgear Orbi app from the App Store or Play Store. Sign up or log in with Netgear.
- Now, connect your phone with the orbi router WiFi network. The app will say it's "searching for your Orbi" and link automatically.
- Once it sees the router, it'll walk you through naming your Wi-Fi and setting a password. Do that. It'll also try to update firmware.

➤ Orbi RBR750 to RBS750 (Satellite) Sync

- Plug your satellites with power outlet and power them on by pressing the power button.
- Now, press the Sync button on the router and satellite. This action will automatically connect the router & satellite.

But you can also use the orbi app to connect the device:

Plug them in around your house, one at a time. They'll auto-connect (ideally). If they flash magenta for more than 5-10 mins, move them closer. These things are picky. If the app did not pick up the satellites, you need to tap "Add More Devices".
